

Windows

Introduction

Flush, ledge-free, double glazed windows provide visibility into the operations in the AES Cleanroom System.

Size

2" thickness

3' x 3.3" high (standard)

Custom sizes, including full-length can be provided.

Design/Manufacturing Features

The units are fabricated in the factory where the tempered glass sheets are assembled and sealed onto an extruded aluminum sub-frame.

Twin glazing provides the proper width to achieve a flush, ledge-free finish.

During the manufacturing process, desiccant is injected to ensure that no condensation problems occur between adjacent areas with temperature differential.

The glazing is finished with a 7/8" black border to the perimeter edges.

Installation

The glazed units are securely mounted into the wall system, as the installation progresses, and a smooth bead of white sealant is applied between the unit and the wall panel.

Having an overall thickness of 2" the internally framed glazed units finish flush with the AES Pharma Wall System wall panel faces.
