

## High-Visability Cleanroom Glass Wall

## Precision with Vision

Architects, Owners, and QA compliance managers alike are specifying high visibility within clean manufacturing areas. This practice promotes client tours and regulatory inspections from outside the cleanroom, which minimizes potential process downtime and product contamination from outside visitors.

AES Infinity Glass Wall System® brings the benefits of glass to your cleanroom — added viewing area, versatility, efficiency, and space saving — all while supporting cleanroom sanitary conditions. The AES Infinity Glass Wall System® can be integrated with the AES pharma cleanroom wall and ceiling system.

The AES Infinity Glass Wall System® glass rails are available in brushed or polished stainless steel and can be configured to meet all of your cleanroom viewing requirements. The AES Infinity Glass Wall System® is designed to incorporate the AES glass swing door as well as other power actuated swing or sliding doors.
